### Sorensen ASD FLX Series

10-320 kW

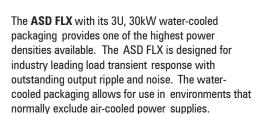

## **Programmable Precision High Power DC Power Supply**

40-60 Vdc\*

• High Power Density: 30kW in 3U

- Water-Cooled
- Front Loading Modules for Flexible Configuration

   Configure modules for 40V, 60V or other (as available) easily with rear panel dip switches
- Advanced Digital Features
  - "Flight data" recorder-like function
  - Advanced fault detection

The ASD FLX gets its name from its modular design with front loading modules for easy access and flexible voltage assignment. ASD FLX chassis houses three 10kW modules which allows user flexibility to scale power requirements by adding additional modules. This configuration provides redundant (n+1) capability as well as significant reduction of Mean Time to Repair (MTTR) which can be accomplished by swapping out a faulty module. The chassis with light weight, removable modules allows for easy one person installation.

Advanced digital controls included in the ASD FLX have the ability to allow you to program slew rates, such as current and voltage without external hardware, as well as program transient response times on the load to emulate specific recovery times. The ASD FLX optional advanced features also allow you to program different "fault levels," enabling detection of output cabling, connections or load problems before they cause critical system problems. The factory flight data recorder feature has the ability to record parameters such as voltage, current, power, load impedance, faults and input voltages, assisting the factory service centers with diagnosis and repair.

The advanced digital monitoring and control features and flexible voltage assignment modules makes the Sorensen ASD FLX the supply of choice for stringent and high value processes and applications.

#### Advanced features include:

- Precise programming of voltage and current slew rate for sensitive loads.
- Industrial field bus interface (Modbus-TCP, Modbus-RTU, Ethernet) enable real-time digital control.
- Built-in energy meter calculates the delivered energy throughout a process or period of time.
- Optional real time clock enables accurate time-stamping of data logged events.
- Built in power quality monitoring detects and saves input voltage anomalies which can be saved for later diagnostic analysis.
- Programmable analog interface scaling facilitates integrating the ASD FLX with existing systems easily.
- · Front panel status LEDs.
- Configure modules for desired voltage (40V, 60V, etc. as available) through convenient rear panel dip switches.
- · Field upgradeable firmware.
- · Master-slave parallel operation capability.
