

USB-APIB Kit Installation and User Guide

USB 2.0 adapter for Audio Precision Interface Bus (APIB) kit, including:

- USB 2.0 interface adapter
- USB 2.0 cable
- APIB cable
- AP2700 control software CD-ROM
- ATS control software CD-ROM

The USB-APIB adapter enables control of Audio Precision APIB-equipped instruments via a USB 2.0 port on the controlling personal computer (PC).

Software support

The USB-APIB adapter is only supported by AP2700 version 3.30 (and later) control software, and ATS version 1.60 (and later) control software. Earlier versions of AP2700 or ATS software do NOT support the USB-APIB adapter. Additionally, legacy software such as APWIN or S1.exe do NOT support the USB-APIB adapter.

Hardware support

All Audio Precision instrument hardware that is supported by the compatible control software (above) will function with the USB-APIB adapter. This includes the 2700 Series instruments, the ATS-2, System Two Cascade and System Two Cascade *Plus*, and any auxiliary equipment connected, such as a DCX-127 or SWR-2755 switchers. System Two (non-Cascade versions) and System One instruments are NOT supported.

Software Installation

If you are using a 2700 Series instrument, a System Two Cascade or System Two Cascade *Plus*, install AP2700 (version 3.30 or later) from the AP2700 CD-ROM provided with this kit. If you are using an ATS-2, install ATS (version 1.60 or later) from the ATS CD-ROM. Follow the on-screen instructions for software installation. This installation can be done before or after hardware connection. System requirements and software manuals are available from the Audio Precision Web site at ap.com.

Hardware Connection

Connect the USB cable from a USB 2.0 port on your PC or laptop to the USB jack on the adapter box. Connect the APIB cable from the adapter box to your instrument. Turn on the instrument and the PC and launch the control software.

For best performance, we recommend that you connect the USB-APIB adapter directly to the PC USB 2.0 port, and that you do not use a USB hub for this connection.

USB 1.0 or 1.1 ports or hubs cannot be used with the USB-APIB adapter.
